

EURO CORK

Some good reasons for choosing **EuroCork**

Cork delivers comfort, water-resistance, wear-resistance and ecological benefits in a range of economical and easy to install floors.

Water resistant

EuroCork is water resistant, perfect for installation in areas where moisture can present problems.

Resistance

EuroCork floors have a superior protection against abrasion and scuffs with its tough wear layer up to 0.55 mm thickness and enhanced DURAMOND or WEARTOP high performance finishes.

Stability

EuroCork floors advanced composition allows for installations up to 500 m² without expansion joints, over radiant heated floors and in areas where the floors are exposed to sunlight.

Ease of installation

EuroCork floors have patented UNICLIC and 3L TRIPLELOCK click systems, allowing easier and faster installation than comparable products. The planks can be installed over almost any subfloor without preparation.

Style

EuroCork planks are longer and wider than most comparable products. The rich surface textures and high definition visuals contribute to the natural and stylish appearance of the floor.

Eco-conscious and safe

EuroCork floors are recyclable, reusable and orthophthalate-free. The use of cork is an ecological choice but also provides comfort underfoot and effective sound and thermal insulation.

In conclusion

EuroCork floors boast superior resistance and stability, whilst combining the beauty of wood, the durability of vinyl, the comfort of cork and the ease of click installation. EuroCork floors are ideal for retail, hospitality, corporate, educational, and residential environments.
